China CIO survey on cloud, old memory and edge AI

The results from our China CIO Survey 1H26 appear positive overall on cloud and edge AI. We see CIOs taking different approaches to memory price inflation.

AlphaWise 

Key Takeaways

- AI still top priority of China CIOs with increasing share in 2026 budgets.
- Public cloud deployment intentions and applications are at new highs.
- More CIOs are taking measures to counter memory price hikes rather than increasing budgets outright.
- We stay OW on cloud semis and remain optimistic on edge AI opportunities.

Our China CIO Survey 1H26 results are overall positive on cloud and edge AI:

Among CIO spending increase priorities, **AI/ML/PA** ranks #1, while **data center build-out** ranks #3 ([Exhibit 1](#)). Intent to deploy GenAI on the **public cloud** reached a survey high, with 54% planning to implement GenAI via the public cloud within the next 12 months, up from 44% in 2H25 and 28% in 1H25 ([Exhibit 2](#)). CIOs estimate that 31% of application workloads now run on **public cloud**, up modestly from 30% in 2H25 and 24% in 1H24 ([Exhibit 3](#)). At present, 63% of CIOs allocate IT budgets to **physical AI** investments, up from 57% in 2H25, and the average share of IT spending devoted to physical AI is set to rise to 5.7%, up from 3.8% in 2H25 ([Exhibit 4](#)).

CIOs are adopting differentiated strategies to address memory price inflation:

38% plan to adjust memory requirements through right-sizing rather than over-provisioning; 17% intend to purchase only mission-critical capacity and defer non-critical upgrades; 13% plan to delay purchases in anticipation of future vendor concessions; 10% will rely on software optimizations and creative configurations to improve memory efficiency; 8% expect to renegotiate vendor contracts or increase the use of LTAs; and 8% plan to purchase de-spec'ed products ([Exhibit 5](#)). On the contrary, only 20% of CIOs would increase hardware budgets outright, and only 10% did not see memory price influencing purchasing habits / patterns.

Stock implications: We remain OW on Aspeed and Montage, supported by continued cloud spending (refer to [Cloud Semis: Much Larger TAM Ahead, Cloud Semis: Catalyst Preview](#)). We also remain OW on Espressif given its edge AI exposure as CIOs lift spending on physical AI investments (refer to [MCU: Bottoming but Not Out](#)). Within old memory, we remain selective and reiterate our view that DDR4 demand remains firm but with capped upside, as CIOs' more cautious behavior suggests current pricing has become unaffordable for some customers ([Exhibit 6](#); refer to [Old Memory - Reaffirming Asymmetric Risks](#)).

Valuation Methodology and Risks

Aspeed Technology (5274.TWO)

Base case, residual income model. Key assumptions:

- Cost of equity of 9.8% (2.0% risk-free rate, 6% risk premium, 1.3 beta)
- Medium-term growth rate of 21.4%
- Terminal growth rate of 5.5%
- Cash payout ratio of 85%

Risks to Upside

- Stronger cloud demand
- Faster-than-expected spec migration
- Mild competition

Risks to Downside

- Softening cloud demand
- Slower-than-expected spec migration
- Intensified competition
- Further policy tightening in China

Montage Technology Co Ltd (6809.HK)

- 30% payout ratio
- 19.3% medium-term growth rate
- 4% terminal growth rate

These assumptions reflect cloud capex growth, DRAM interface technology migration, and Montage's strong position in China's datacenter semi localization. We then apply an exchange rate of 1.131 HKD:1 RMB, assuming no H-share discount vs the A-share.

Risks to Upside

- Faster-than-expected phase-out of US peers
- Faster-than-expected spec migration

Risks to Downside

- Weaker-than-expected cloud demand
- Slower-than-expected DRAM interface technology migration
- Delay in new product launches

Montage Technology Co Ltd (688008.SS)

Base case, residual income model. Key assumptions:

- 30% payout ratio

- 19.3% medium-term growth rate
- 4% terminal growth rate

These assumptions are justified, given cloud capex growth, DRAM interface technology migration, and Montage's strong position in China's datacenter semi localization.

Risks to Upside

- Faster-than-expected phase-out of US peers
- Faster-than-expected spec migration

Risks to Downside

- Weaker-than-expected cloud demand
- Slower-than-expected DRAM interface technology migration
- Delay in new product launches

Espressif Systems (688018.SS)

Base case, residual income model. We assume an 8.9% cost of equity (beta 1.1, risk-free rate 2.0% and risk premium 6.0%), a payout ratio of 40%, a medium-term growth rate of 18.5%, and a terminal growth rate of 4.5%.

Risks to Upside

- China's MCU localization goes faster than expected.
- Gains traction from new customers.
- Margin expansion is more significant.

Risks to Downside

- China's MCU localization pace is slower than expected.
- Traction from new customers is less than expected.
- Margins erode amid more intense competition.
