## Greater China Technology Hardware

## Global AI Transceivers: Industry Demand Likely to be Even Stronger

## WHAT'S CHANGED

|                                            |          |                  |
|--------------------------------------------|----------|------------------|
| Accelink Technologies Co. Ltd. (002281.SZ) | From     | To               |
| Price Target                               | Rmb60.00 | <b>Rmb166.00</b> |

|                                          |           |                  |
|------------------------------------------|-----------|------------------|
| Eoptolink Technology Inc Ltd (300502.SZ) | From      | To               |
| Price Target                             | Rmb460.00 | <b>Rmb710.00</b> |

With demand visibility strengthening materially in recent months, we raise our 2026-28 AI transceiver shipment forecasts and reiterate our positive view on the industry.

## Key Takeaways

- Our US team recently raised its PTs on Lumentum to US\$900 and Coherent to US\$330.
- We reiterate our OW rating on Eoptolink and raise our PT to Rmb710.

**Demand/visibility has strengthened materially, led by Lumentum:** In April 2026, Lumentum's CEO said hyperscaler demand is accelerating so quickly that the company could be "sold out through 2028" within two quarters. The company expects ~85% CAGR in InP optical lane volume demand (EML, CW, UHP lasers) through 2030.

**Momentum is broad-based across AI transceivers:** Multiple vendors reported large orders, product launches, and technology demos in March and April, highlighting continued ramps in 800G, accelerating adoption of 1.6T and active development toward 3.2T—all consistent with intensifying AI data-center buildouts and a positive industry outlook.

**Forecast revisions skew materially higher:** We raise our AI transceiver shipment forecasts to 73 mn units from 53 mn in 2026, to 141 mn from 71 mn in 2027, and to 150 mn from 80 mn in 2028. The larger 2027-28 revisions mainly reflect a more positive view on 1.6T demand. We now forecast AI transceiver TAM to grow from US \$18 bn in 2025 to US\$102 bn in 2028, or >4x in three years.

**Component shortages are the key risk; mix is shifting toward silicon photonics:**

According to LightCounting, silicon photonics' share of the optical transceiver market rose from 10% in 2018 to 33% in 2024 and is expected to become dominant in 2026. We believe faster penetration reflects both performance gains and EML shortages, which are encouraging alternative solutions. Component shortages remain the key risk to rapid volume growth in 2026-28.

# AI Transceiver Demand Highly Likely to be Stronger

After Lumentum, an industry leader, indicated that it could be "nearly sold out through 2028," we believe the cycle could be stronger than expected. We therefore raise our AI transceiver shipment forecasts from 53 mn units to 73 mn units in 2026, from 71 mn units to 141 mn units in 2027, and from 80 mn units to 150 mn units in 2028. The significant upward revision in 2027 and 2028 mainly reflects our more positive view on 1.6T demand. After this revision, we now forecast the AI transceiver industry TAM to grow from US\$18 bn in 2025 to US\$102 bn in 2028, or >4x within three years.

In the US, our Telecom and Networking Equipment team, led by Meta Marshall, recently raised its price targets on Lumentum from US\$710 to US\$900 and Coherent from US\$290 to US\$330, driven by a stronger production ramp and increasing margin leverage as supply remains tight, particularly in lasers / pump lasers vs. transceivers.

In Asia, we reiterate our OW rating on Eoptolink and raise our price target to Rmb710. We also raise our price target on Accelink on a more positive industry demand outlook. For TFC, we think the recent rally has partially reflected CPO upside potential, while weaker-than-expected 1Q26 results support keeping our price target unchanged.

## Our Key Revisions and MS View vs. Consensus

We summarize our key revisions to AI transceiver estimates below.

**Exhibit 1:** We Raise our 800G and 1.6T Shipment Forecasts

| <i>(mn units)</i>         |              |              |              |

| 1.6T                      | 52%          | 233%         | 226%         |
| <b>Total</b>              | <b>38%</b>   | <b>98%</b>   | <b>87%</b>   |

Source: Company data, Morgan Stanley Research estimates

We believe our forecasts are more bullish than consensus. Compared with LightCounting's 65% growth forecast in 2026, we estimate shipment growth for 800G+1.6T to exceed

200%. For 2027, we forecast shipment growth of 93%, also well above LightCounting's estimate.

**Exhibit 2:** LightCounting Forecasts Ethernet Optical Transceiver Growth of 65% in 2026 and 20-30% in 2027

**Figure: Growth rates across main segments of the optical transceiver market in 2023-2031**

Source: LightCounting

Source: LightCounting, Data as of April 2026

We keep our CPO estimates unchanged from the numbers published on February 26.

## Industry Leader's 'Sold out Through 2028' Comment Reflects Strong Momentum

Lumentum CEO Michael Hurlston stated in April 2026 that demand from US hyperscalers for the company's optical components is accelerating so rapidly that the company expects to fill its entire order book through 2028 within just two quarters. In his words: "The capex numbers from the US hyperscalers are enormous and there seems to be no end in sight. We're falling further and further behind the demand. We would be sold out through all of 2028 within two quarters." Per LITE's OFC investor briefing on March 7, 2026, the company expects an ~85% CAGR in InP optical lane volume demand for EML, CW, and UHP lasers through 2030. Coherent has also spoken about scaling InP capacity by 100%+ over the next two years, which should support continued sequential acceleration. Sumitomo and Broadcom have also commented on capacity expansions.

**Exhibit 3:** Demand Still Outstripping Supply

## AI Transceiver Momentum Remains Strong; Optical Supply Constraints Persist

Beyond the positive updates from Lumentum, other AI transceiver companies have also seen a wave of positive developments through OFC and into earnings, driven by surging AI data center demand, major new orders, product launches and technology breakthroughs. Below are several recent optical notes discussing these highlights:

[Optical: OFC 2026 Wrap-Up: Bright Lights, Big City \(March 19, 2026\)](#)

[Lumentum: OFC Investor Briefing Wrap-Up: Multiple Ways to Win \(March 18, 2026\)](#)

[Optical: Latest Questions From Investors as Optical Breaks Out \(April 20, 2026\)](#)

[Lumentum: Showing Pricing Power in Margins \(May 6, 2026\)](#)

[Coherent: Executing to Plan \(May 7, 2026\)](#)

[Corning: Springing into 2030 - Thinking Inside and Outside the Box \(May 7, 2026\)](#)

- **Coherent** (March 18, 2026 / May 6, 2026): Coherent presented a market-leading roadmap for pluggable transceivers covering 800G (continued ramp), 1.6T (accelerating ramp), and 3.2T (in development). The company also demonstrated an industry-first 400G

end-to-end link and introduced a new XPO form factor for high-density applications. On FQ3 earnings, management framed June as a “new inflection point” for revenue growth, driven by accelerating sequential revenue growth, strong demand and improving supply. Management also noted that InP capacity is expected to double by year-end, one quarter earlier than planned.

- **AOI** (March 9, 2026 / May 7, 2026): On March 9, 2026, AOI received its first volume order for 1.6T data center transceivers, with the initial order totaling more than \$200 mn. On March 23, 2026, AOI received a new volume order for 800G single-mode data center transceivers from the same hyperscale customer, totaling more than \$53 mn. On April 2, 2026, AOI received an additional upsized \$71 mn order for 800G transceivers from the same customer, bringing total orders from this customer to \$124 mn since mid-March. FQ1 results were slightly disappointing as capacity was still ramping, perhaps more slowly than expected, but management continued to highlight strong demand conditions.

- **Fabrinet** (May 4, 2026): Fabrinet reported largely in-line results, with the biggest near-term outperformance in the telco / DCI / scale-across / ZR portfolio. On the call, the company noted: “We could have shipped a lot more if we had those components, you know, without the supply constraints, datacom revenue would have been a new record by a wide margin. While we expect the constraints to get resolved over time, we do have to deal with them right now. In the near term, we anticipate that supply volatility will continue. And, you know, it's in a number of areas. It's not any one component. It's mainly lasers, memory, which I think it's no secret that there's a global shortage of memory. And also certain Asics. So it's across a number of commodities.”

- **Eoptolink** demonstrated its next-generation IMDD 400G per-lambda based 1.6T DR4 OSFP transceiver at OFC 2026, reducing required fiber count by 50% compared to the previous-generation 1.6T DR8 architecture.

- **Hyper Photonix** unveiled its next-generation 1.6T optical transceiver product line based on 200G per lane Silicon Photonics (SiP) technology at OFC 2026.

- **ENET** (March 5, 2026): Launched its new 1.6T DR8 OSFP224 optical transceiver designed for AI, HPC, and hyperscale data center environments using 224G electrical signaling, compatible with NVIDIA switches.

- **Linktel Technologies** (March 18, 2026): Its 800G OSFP FR4 10km and 800G OSFP 2LR4+ 20km dispersion managed transceivers won 2026 Lightwave Innovation Awards, receiving scores of 5.0 and 4.0, respectively, setting a new industry benchmark for stable, long-reach 800G connectivity.

- **Siemon** (April 28, 2026): Launched a portfolio of 200G, 400G, and 800G PAM4 high-speed optical transceivers to support AI, HPC, and next-generation data center networks, available in OSFP and QSFP DD form factors.

According to *LightCounting*, silicon photonics' share of the optical transceiver market rose from 10% in 2018 to 33% in 2024 and is expected to become the dominant technology in 2026 for the first time. We believe this reflects both silicon photonics' good performance and EML shortages, which are encouraging more end users to adopt silicon photonics solutions.

## We Raise our AI Transceiver Industry Forecasts in 2026-2028e

Our positive view on AI transceiver demand remains unchanged, supported by several key fundamental drivers:

1. **AI data center expansion:** The large increase in demand for AI data centers is a primary driver of transceiver growth. As AI workloads expand, connectivity is shifting away from copper and electrical systems toward optical content, requiring advanced optical transceivers for rack-to-rack connections.
2. **Strong AI capex from global leaders:** The top 11 cloud players are now estimated to spend approximately US\$735-795bn on cash capex in 2026, representing approximately 60% YoY growth. For example:
  - a. We expect Amazon to devote approximately US\$200bn to capex in 2026 (+52% Y/Y).
  - b. Google/Alphabet has guided for 2026 capex of US\$175-185bn (+97% Y/Y at the midpoint).
  - c. Meta Platforms has guided for 2026 capex of US\$115-135bn (+73% Y/Y at the midpoint).
3. **Continuous new product innovation:** As network architecture becomes more complex and demand for data transmission speed increases, the industry is seeing strong growth in both 800G and 1.6T transceivers. The 1.6T ramp has brought higher ASPs and better margins. 3.2T R&D is also in the pipeline and could become another growth driver in the years ahead.

However, the positive surprises we have observed in March and April suggest demand is even stronger than expected. We therefore revise up our estimates, especially for 1.6T in 2027e and 2028e. For more detail, please see [Exhibit 1](#).

After this revision, we expect AI transceiver industry TAM to increase from US\$18bn in 2025 to ~US\$102bn in 2028, or >4x the 2025 level.

**Exhibit 5:** Global AI Transceiver TAM to expand by >4x from 2025-2028e

Unit in US\$ bn, Source: Company Data, Omdia, Morgan Stanley Research (E) estimates

## CPO Development Has Become less Surprising

We have observed accelerated CPO development, supported by recent comments from leading US companies during their 2Q FY26 results calls. Since then, CPO developments have become less surprising, and we maintain our bull-base-bear estimates unchanged, as outlined below:

Based on our semiconductor colleagues' analysis, CPO switch volume could grow from 4,712 units in 2025 to 103,889 units in 2028 under our base case scenario.

Under our bull case scenario, CPO switch volume could increase from 2,500 units in 2025 to 50,000 units in 2028.

Under our bear case scenario, CPO switch volume could even increase from 10,000 units in 2025 to 250,000 units in 2028.

We note that Corning is the latest company to receive a large investment from NVDA, announced at its [Analyst Day on May 6, 2026](#). This investment gives NVDA ample access to fiber / optics for CPO, but the bulk of the impact starts in 2028. Views differ on CPO penetration by 2030, with estimates ranging from 10% to 50%.

**Exhibit 6:** Corning's Opportunity Roadmap Post NVDA Infusion Notes Relatively Small CPO Impact By 2028

Source: Corning.

**Exhibit 7:** Our base, bull, and bear cases for 800G/1.6T global demand forecasts in 2026-28e

# Key Stocks

## 1) AI transceiver players

**Eoptolink:** We reiterate OW on Eoptolink and raise our price target to Rmb710. We believe the company is a key market share gainer in both the 800G and 1.6T transceiver segments. It is highly likely to generate above-industry growth, which is a key re-rating driver for the stock.

**Suzhou TFC:** We maintain our Rmb371 price target and EW rating. We believe the recent share price rally has already reflected the potential positive impact from accelerated CPO development. However, the company should also benefit from strong AI transceiver industry growth, which should help support its valuation premium in the A-share market.

**Coherent:** We see likely better opportunity with Coherent vs. LITE in the medium term if it can execute on share gain opportunities. Coherent has seen little of the margin accretion that LITE has delivered; as its 100% InP capacity expansion comes online, this should support the stock. We see Coherent as more susceptible to volatility around CPO, given its larger transceiver volume, though this could be offset by laser revenue.

**Lumentum:** LITE is up 900%+ over the past year (vs. the S&P500's 26% increase). Buy-side estimates are calling for a 20x increase in earnings over the next three years (and applying a 20-25x multiple to that). Therefore, we do think that even though the company is executing extremely well on the current market opportunity, the stock would be most at risk, given that estimates need pricing conditions to stay in place through FY28 to support valuation.

**LandMark:** LandMark is the dedicated SiPh epiwafer supplier for customized transceivers for major US CSPs. We expect its close supply relationship with large-scale CSP customers to drive SiPh revenue growth of 148% and 69% YoY in 2026 and 2027e, respectively, accounting for >80% of total revenue. LandMark recently signed a five-year supply agreement for InP substrates with Sumitomo Electric, which should help alleviate InP substrate supply tightness.

**VPEC:** VPEC also provides epiwafer services for optical transceivers, mainly for photonic diodes (PDs), but is also extending its offering to laser diodes (LDs) for data transmission scale-across. We expect its AI datacom revenue to double YoY in 2026, while InP substrate supply remains the swing factor for its near-term optical-related production, given the InP substrate export ban in China.

**Luxshare:** Luxshare's 800G optical transceiver module is in mass production, while its 1.6T module is under qualification.

## 2) PCBs and Connectors

**An increase in transceiver demand would benefit related PCB suppliers such as Unimicron, Zhen Ding, and Shennan.** These companies are key suppliers of transceiver PCBs, which require more HDI/mSAP technology. Our understanding is that this space, especially for 800G+ transceiver PCBs, is currently capacity constrained, so exposed suppliers should benefit meaningfully in terms of revenue and profitability.

**However, investors remain focused on the longer-term shift to CPO. We therefore re-highlight the changes we think could affect our coverage as the industry shifts from discrete transceivers toward CPO architecture.**

**We believe this shift could pose structural headwinds for PCB and CCL vendors under our coverage, including Shennan Circuits, Zhen Ding, Unimicron, Gold Circuit, and Shengyi Tech, and we will continue to monitor the situation.**

**Shennan, Zhen Ding, and Unimicron are likely to face more direct pressure** from the elimination of HDI/mSAP PCBs used in optical modules, given their relatively higher revenue exposure to this segment.

**Meanwhile, Gold Circuit and Shengyi Tech could be adversely affected by the de-spec of switch motherboards under CPO architecture,** as optics are co-packaged with networking ASICs on the substrate rather than mounted on the motherboard.

**We also expect CPO adoption to be slightly negative for electrical copper cable suppliers we cover, such as FIT and Lotes.** That said, we believe copper solutions will still dominate the data center interconnect market over the next couple of years, given their cost advantage and broad supplier base.

**In contrast, we see IC substrates as a key beneficiary of the transition to CPO.** Co-packaging optics onto IC substrates is expected to drive more complex substrate designs, including larger substrate sizes, higher layer counts, and the adoption of more advanced structures and materials. This would translate into higher substrate area consumption, helping absorb the current oversupply in the ABF substrate market and supporting an accelerated recovery in supplier profitability.

**We believe both Unimicron and NYPCB in our coverage will benefit from this trend,** given their expertise in producing high-end networking ASIC substrates.

That said, the availability of critical substrate materials, particularly T-glass, will be a key factor to monitor. It could emerge as a supply bottleneck if large-area size substrates become more widely adopted in CPO architecture.

### 3) Interconnect, testing equipment and network switches

#### Bizlink

Bizlink was originally viewed as one of the players in the copper camp, but its acquisition of XFS has opened up more opportunities in CPO by enhancing its optical capabilities and customer relationships. Our checks indicate that Bizlink will provide shuffle box assembly for CPO switches.

Blizlink has no exposure to current laser diode based transceivers, but it is working with partner Credo on micro LED-based optical interconnects or ALCs. We view ALC as well suited for 20-30 meter deployments, with better cost performance and power efficiency than mainstream transceivers. We expect ALC shipments to start from 2Q27 at the earliest, per guidance from Credo.

#### Chroma

Chroma should benefit from the CPO theme through its testing equipment. Our checks

indicate that it will provide the testing equipment for Insertion 3 (optical engine testing) and Insertion 4o (optical testing for the switch IC+OE). We expect shipments for pilot capacity to start in 2H26, with more confirmed orders scheduled for 2027. Longer term, Chroma might have more opportunities in Insertion 1 or additional testing processes if existing equipment suppliers cannot deliver the requested performance.

Chroma also has a strong presence in optical testing equipment for transceivers. During its latest 1Q26 earnings call, management said it is seeing very strong orders from customers in this area, with orders continuing to flow in.

### Accton

As one of the major network switch ODM direct suppliers, Accton showcased its CPO switch model at the latest OFC in March. We believe Accton is now engaging with potential customers on ODM projects for CPO switches.

## 4) European stock ideas

**STM:** STMicro is positioning itself as a supplier for next-gen data centre connectivity by developing its capabilities in silicon photonics and BiCMOS technologies. Both technologies are relevant to CPO and high-speed pluggable transceivers, with STM seeking to address the growing demand for higher bandwidth (800Gbps to 1.6Tbps+) and improved power efficiency in AI clusters. STM views CPO as a solution to the limitations of traditional electrical I/O, which cannot keep up with the bandwidth requirements of AI. By 2030, STM expects a multi-billion-dollar TAM for its silicon photonics foundry services as data centres increasingly adopt these technologies.

**How is this being done?** From a production and technology rollout perspective, STM is migrating its SiPh technology onto 300mm wafers (at the Crolles, France facility), with first products shipping and production ramping in 2H26. While initially focusing on 800Gb/s and 1.6Tb/s pluggable transceivers, STM is also developing technology for the long-term shift toward CPO, which involves placing optical engines immediately adjacent to high-speed switch ASICs. The core components offered by STM includes Photonic Integrated Circuits (PICs), including the PIC100 to be used by AWS, and Electronic Integrated Circuits (EICs) using STM's own BiCMOS technology for high-speed laser drivers and amplifiers, supporting up to 400Gbps speeds. To support the future move to CPO, STM is developing smaller modulators and exploring through-silicon vias (TSVs) to reduce the power draw and minimise signal loss between the PIC and EIC.

**Our view:** For a few quarters now, STM has signaled its positioning in high-growth data centre silicon, with silicon photonics already highlighted by the company as a key driver for 2026. Management has already guided to data centre revenues climbing from c. \$350m in 2025 to c. \$500m in 2026 and then on to c. \$1bn by 2030. This is underpinned by increasing adoption of cloud interconnect (photonic ICs and analog mixed signal BiCMOS chips). STM recently announced an extended collaboration with AWS, which intersects opportunities in AI connectivity and is said to deliver multi-billion-dollar sales over the next few years for STM.

**Nokia:** 8% of Group revenues are from AI & Cloud. The equity story is one of transformation away from sluggish Telco spend to being a key beneficiary of

infrastructure capex supporting AI and Cloud expansion (data centers). Nokia's optical and IP network divisions provide a range of solutions for data center customers including coherent pluggables and switching platforms, and benefit from being vertically integrated with new fab capacity in North America being ramped up.

**Soitec:** Engineered substrate exposure to silicon photonics through Photonics-SOI, used in high-speed data-centre interconnects. We see Soitec as an (in)direct beneficiary of the 800G and 1.6T transceiver ramp and the move toward SiPh while CPO should provide robust growth beyond 2027.

**Aixtron:** MOCVD tool exposure to InP and GaAs photonics capacity, including EML/CW laser manufacturing. Stronger AI optical demand is driving Photonics revenue >100% with continued strong demand expected thereafter.

**Besi:** Advanced die attach and hybrid bonding exposure to higher-density optical packaging and emerging CPO interfaces. As optical engines move closer to ASICs, packaging accuracy and 3D integration requirements should rise, supporting Besi's higher-end tool mix and our OW case.

For more details regarding our stock ideas, please refer to the summary table below.

# Revisions to our Estimates

## We raise earnings on a more positive demand outlook for 2026-28

Following the change in industry demand, we expect 800G and 1.6T demand to be even stronger in 2026-2028. We now forecast aggregate 800G+1.6T volume to increase by >250% in 2026 and grow another 90% in 2027.

**Exhibit 9:** Bullish transceiver demand outlook in 2026-28

Source: Company Data, Morgan Stanley Research estimates

In addition to a more positive demand outlook for the next 2-3 years, we also reviewed the latest 1Q26 financial results. Leading transceiver company Eoptolink delivered upbeat revenue growth while earnings were in line. Despite rapid top-line growth, the company highlighted the negative impact of component shortages; absent these shortages, growth momentum could have been even stronger. Cross checking with the financial performance of other AI transceiver industry leaders, we find that companies with large overseas revenue exposure and strong partnerships with top-tier hyperscalers are better positioned to deliver superior growth.

For TFC and Accelink, relatively weaker 1Q26 financial performance also supports our more conservative stance on the stocks. However, if industry demand remains strong, these two companies are also likely to benefit and deliver better growth in the coming quarters.

**Exhibit 10:** Summary of 1Q26 results

We raise our 2026 net income estimate by 5%. For 2027-28, we raise our earnings estimates more aggressively, as the company should capture more growth opportunities.</li> </ul> |
| 002281.SZ | Accelink  | <ul style="list-style-type: none"> <li>Following 1Q26 results, we raise our 2026 forecast by 16% to reflect the upward revision to industry demand and the 1Q26 OP beat. For 2027-28, we raise our estimates by 37-55% to reflect a more positive demand outlook.</li> </ul>                                                                        |

# Valuation

Given high uncertainty around whether and when a CPO breakthrough can be achieved, we have decided to apply a probability-weighted bull-base-bear valuation methodology (30% bull, 50% base, 20% bear). In each scenario, we use a residual income (RI) model to derive intrinsic value. Growth, margin, and return assumptions differ by scenario, while some key assumptions remain the same across all the three scenarios, including 1) a cost of equity of 10%, and 2) a terminal growth rate of 3.5%.

**Exhibit 12:** Eoptolink: Our probability-weighted bull-base-bear valuation

Source: Morgan Stanley Research estimates.

Taking Eoptolink as an example, in our base case scenario, we assume the CPO breakthrough will arrive in 2027 or later while the company's revenue increases from Rmb54bn in 2026 to Rmb113bn in 2028 with earnings increasing from Rmb19bn to Rmb41bn over the same period. The earnings CAGR could reach 11% in 2028-2036e.

In our bull case scenario, we forecast that the CPO breakthrough is further delayed, while NPO technology matures ahead of that. As a result, the company's revenue increases from Rmb55bn in 2026 to Rmb119bn in 2028, with earnings increasing from Rmb19bn to Rmb43bn over the same period. The earnings CAGR could reach 14% in 2028-2036e.

In our bear case scenario, we expect CPO to achieve an earlier-than-expected breakthrough. As a result, the company's revenue grows more slowly, from Rmb48bn in 2026 to Rmb97bn in 2028, with earnings increasing from Rmb16bn to Rmb35bn over the same period. The earnings CAGR could be 7% in 2028-2036e.

The probability-weighted bull-base-bear valuation yields an intrinsic value of Rmb710/share for Eoptolink.

We apply similar approaches for TFC and Accelink and derive the probability-weighted bull-base-bear intrinsic values shown in [Exhibit 13](#).

- For our base case, we expect global industry demand for high-end transceivers (800G + 1.6T) to grow from 73mn units in 2026e to 141mn units in 2027e and 150mn units in 2028e, with CAGR reaching 43% in 2026-2028e (was 23%).
- For our bull case, we now expect global industry demand for high-end transceivers (800G + 1.6T) to grow from 74mn units in 2026e to 146mn units in 2027e and 158mn units in 2028e, with CAGR reaching 46% in 2026-2028e (was 27%).
- For our bear case, we now expect global industry demand for high-end transceivers (800G + 1.6T) to grow from 63mn units in 2026e to 124mn units in 2027e and 129mn units in 2028e, with CAGR reaching 43% in 2026-2028e (was 16%).

Changes in net profit CAGR over 2025-35e are the key driver of changes in scenario values, as shown in [Exhibit 14](#).

## Forward P/E valuation range

Reflecting rising share prices for Eoptolink, TFC and Accelink, valuations have increased. For example, since the beginning of 2025, Eoptolink's 12-month forward P/E has risen from 8x to 22x. If we compare current valuations to historical ranges, both Eoptolink and TFC are now trading above +1 SD.

# Price Target Changes

Given high uncertainty around whether and when a CPO breakthrough can be achieved, we have decided to apply a probability-weighted valuation methodology – 30% bull, 50% base, 20% bear. This skew reflects the expected timeline for large-scale CPO adoption. We acknowledge that CPO represents a structural architectural shift and a credible long-term risk to pluggable transceivers. However, given constraints around manufacturing yield, thermal complexity, cost, ecosystem maturity, and serviceability, we believe the impact will remain limited in the medium term under our base case.

Our assumptions for cost of equity (RFR, beta, risk premium) and terminal growth rate are unchanged.

**Exhibit 18:** Summary of price target changes

| Ticker    | Company   | Curr | Old    | PT New | % Chg |
|-----------|-----------|------|--------|--------|-------|
| 300502.SZ | Eoptolink | RMB  | 460.00 | 710.00 | 54%   |
| 300394.SZ | TFC       | RMB  | 371.00 | 371.00 | 0%    |
| 002281.SZ | Accelink  | RMB  | 60.00  | 166.00 | 177%  |

## Risk Reward – Accelink Technologies Co. Ltd. (002281.SZ)

Fundamentals weaker vs. industry peers; UW

### PRICE TARGET Rmb166.00

Residual income model, probability-weighted 30% bull, 50% base, 20% bear - skew reflects expected timeline for large-scale CPO application.

Key assumptions:

- CoE and terminal growth rate: 10% and 3.5% across scenarios
- High-end transceivers demand CAGR in 2026-2028: bull 46%, base 43%, bear 43%
- 2025-35e net profit CAGR: bull 36%, base 31%, bear 25%.

#### Consensus Price Target Distribution

Source: Refinitiv, Morgan Stanley Research

### RISK REWARD CHART

Key: — Historical Stock Performance ● Current Stock Price ◆ Price Target

Source: Refinitiv, Morgan Stanley Research

### UNDERWEIGHT THESIS

- Accelink derives 70% of its revenue from the domestic market. We see a low chance of significant medium- to long-term growth in view of: 1) limited growth of telco capex, 2) still-high transceiver inventory at telecom equipment vendors, and 3) margin pressure stemming from more intense competition.
- Datacom has become a new growth driver, but a lack of US cloud exposure could pressure Accelink's pricing and revenue sustainability.
- After the recent share price correction, the stock is still trading above 54x 2026e PE, which is not attractive vs most peers. We therefore maintain our UW rating.

#### BULL CASE

Rmb220.00

54x bull case 2027e EPS

**Accelerated domestic networking spending and stronger 800G and 1.6T ramp-up:** We assume accelerated domestic networking spending as well as stronger demand for 800G and 1.6T, which would be key catalysts for the company in 2026-2027. CPO disruption arrives after 2028.

#### BASE CASE

Rmb160.00

47x base case 2027e EPS

**Decent growth in 2026; limited medium-/long-term upside:** Driven by datacom products, we expect strong growth in 2026. Over the long run, we expect limited growth with: 1) transmission network upgrades and share gains in the datacom market, and (2) largely stable GPM. Datacom has become a new growth driver, but a lack of US cloud exposure could pressure pricing and revenue sustainability. CPO to achieve manufacturing breakthrough by 2027 with large-scale application to kick off in 2H27 or 2028.

#### BEAR CASE

Rmb100.00

37x bear case 2027e EPS

**Intense competition and weaker-than-expected orders:** We assume weak domestic networking spending as well as slower demand for 800G and 1.6T products. Accelink also faces intense competition and pricing pressure, causing it to de-rate further. CPO achieves manufacturing breakthrough in 2H26 and 2027 - disruption arrives earlier than expected.

## Risk Reward – Accelink Technologies Co. Ltd. (002281.SZ)

### KEY EARNINGS INPUTS

| Drivers                      | 2025 | 2026e | 2027e | 2028e |
|------------------------------|------|-------|-------|-------|
| Transmission revenue YoY (%) | 10.0 | 30.0  | 30.0  | 20.0  |
| Access revenue YoY (%)       | 45.8 | 30.0  | 30.0  | 30.0  |
| Datacom revenue YoY (%)      | 80.0 | 30.0  | 40.0  | 40.0  |

### INVESTMENT DRIVERS

### RISKS TO PT/RATING

#### RISKS TO UPSIDE

- Stronger 800G and 1.6T ramp-up
- Penetration in new datacom customers
- Later breakthrough in CPO
- Faster domestic networking spending

#### RISKS TO DOWNSIDE

- Slower-than-expected growth in the datacom market
- Weaker-than-expected demand for 800G and 1.6T products
- Earlier breakthrough in CPO or other new technology
- Margin pressure due to intensified competition in the domestic market
- Component shortages

## Risk Reward – Eoptolink Technology Inc Ltd (300502.SZ)

Key market share gainer in 800G and 1.6T; OW

### PRICE TARGET Rmb710.00

Residual income model, probability-weighted 30% bull, 50% base, 20% bear - skew reflects expected timeline for large-scale CPO application.

Key assumptions:

- CoE and terminal growth rate: 10% and 3.5% across scenarios
- High-end transceivers demand CAGR in 2026-2028: bull 46%, base 43%, bear 43%
- 2025-35e net profit CAGR: bull 28%, base 25%, bear 20%.

#### Consensus Price Target Distribution

### RISK REWARD CHART

Key: — Historical Stock Performance ● Current Stock Price ◆ Price Target

Source: Refinitiv, Morgan Stanley Research

### OVERWEIGHT THESIS

- We believe scale-up and scale-out technologies will be widely applied in data center architecture, which could significantly boost the demand for high-end (800G and 1.6T) transceivers.
- We believe the company is a key market share gainer in both the 800G and 1.6T transceiver segments. With upbeat 1Q26 results and large overseas exposure, it is highly likely to generate above-industry growth, which is a key re-rating driver for the stock.
- CPO risk is well known after the recent active debate, so we see lower risk of de-rating for this reason. The rapid earnings growth momentum could become a key re-rating catalyst.

#### BULL CASE

Rmb900.00

22x bull case 2027e EPS

**Stronger 800G and 1.6T demand:** We assume stronger demand for 800G and 1.6T, which would be key catalysts for the company in 2026. CPO disruption arrives after 2028.

#### BASE CASE

Rmb700.00

21x base case 2027e EPS

**Strong growth momentum in 2026:** We expect 800G and 1.6T to continue to drive earnings growth for Eoptolink. With continued market share gain momentum, we believe Eoptolink will benefit from the 800G and 1.6T cycles in 2026. CPO to achieve manufacturing breakthrough by 2027 with large-scale application to kick off in 2H27 or 2028.

#### BEAR CASE

Rmb450.00

17x bear case 2027e EPS

**Intense competition from silicon photonics players and weaker-than-expected order:** We assume slower demand for 800G and 1.6T products. Eoptolink also could face intense competition from silicon photonics players, which would result in lower share, margins, and ASPs. In this case, it would also de-rate further. CPO achieves manufacturing breakthrough in 2H26 and 2027 - disruption arrives earlier than expected.

## Risk Reward – Eoptolink Technology Inc Ltd (300502.SZ)

### KEY EARNINGS INPUTS

| Drivers                          | 2025 | 2026e | 2027e | 2028e |

### RISKS TO PT/RATING

#### RISKS TO UPSIDE

- Later breakthrough in CPO
- Greater-than expected 800G/1.6T demand
- Faster-than-expected share gains in the datacom market
- Better cost control, leading to margin improvement

#### RISKS TO DOWNSIDE

- Earlier breakthrough in CPO or other new technology
- Slower-than-expected share gains in the datacom market owing to intense competition/geopolitical tension
- Weaker-than-expected demand for 800G and 1.6T products
- Component shortage

## Risk Reward – Suzhou TFC Optical Communication Co Ltd. (300394.SZ)

Positives largely priced in; EW

### PRICE TARGET Rmb371.00

Residual income model, probability-weighted 30% bull, 50% base, 20% bear - skew reflects expected timeline for large-scale CPO application.

Key assumptions:

- CoE and terminal growth rate: 10% and 3.5% across scenarios
- High-end transceivers demand CAGR in 2026-2028: bull 46%, base 43%, bear 43%
- 2025-35e net profit CAGR: bull 34%, base 30%, bear 25%.

#### Consensus Price Target Distribution

Source: Refinitiv, Morgan Stanley Research

### EQUAL-WEIGHT THESIS

- TYFC is a leading passive component supplier in the global transceiver supply chain. Thus, we believe it will continue to benefit from strong growth in the AI transceiver industry.
- We maintain our EW rating because we believe the recent share price rally has already reflected the potential positive impact from accelerated CPO development.

#### Risk Reward Themes

New Data Era: *Positive*

View descriptions of Risk Rewards Themes [here](#)

#### BULL CASE

Rmb500.00

##### 68x 2027e bull case EPS

**Stronger 800G and 1.6T demand:** We assume stronger demand for 800G and 1.6T products and faster-than-expected market share gains, which would be a key catalyst for the company. CPO disruption arrives after 2028.

#### BASE CASE

Rmb350.00

##### 57x 2027e base case EPS

**800G products and 1.6T products to drive growth:** We expect 800G and 1.6T products to drive robust growth in 2026-27. CPO to achieve manufacturing breakthrough by 2027 with large-scale application to kick off in 2H27 or 2028.

#### BEAR CASE

Rmb230.00

##### 47x 2027e bear case EPS

**Intense market competition and weaker-than-expected orders:** We assume slower demand for 800G and 1.6T products. We assume intense market competition along with pricing pressure leads to lower gross margins and earning misses in the near future. We also note that TFC's new production line for high-speed optical engines has low margins currently. CPO achieves manufacturing breakthrough in 2H26 and 2027 - disruption arrives earlier than expected.

Ltd., Asustek Computer Inc., AU Optronics, Axon Enterprise Inc, BE Semiconductor Industries NV, Bizlink, Catcher Technology, Chenbro, Ciena Corporation, Cisco Systems Inc, Coherent Corp, Compal Electronics, Corning Inc, Delta Electronics Inc., E Ink Holdings Inc., Ennostar Inc, Eoptolink Technology Inc Ltd, F5 Inc, FIT Hon Teng Ltd, Giga-Byte Technology Co. Ltd., Gold Circuit Electronics Ltd., Hon Hai Precision, Innolux, Keysight Technologies Inc, Lenovo, Lens Technology, Lingyi Itech Guangdong Co, Lite-On Technology, Lumentum Holdings Inc, Luxshare Precision Industry Co., Ltd., Motorola Solutions Inc, Nokia Oyj, Pegatron Corporation, Q Technology (Group) Company Ltd, Quanta Computer Inc., Sanan Optoelectronics, Shenzhen Transsion Holdings Co Ltd, Soitec SA, STMicroelectronics NV, Suzhou TFC Optical Communication Co Ltd., TCL Corp., Unimicron, Wistron Corporation, Wiwynn Corp, Xiaomi Corp, Yageo Corp., Yangtze Optical Fibre and Cable JSC Ltd, Zebra Technologies Corporation, Zhen Ding, Zhongji Innolight Co Ltd.

Within the last 12 months, Morgan Stanley has received compensation for products and services other than investment banking services from AAC Technologies Holdings, Accton Technology Corporation, Acer Inc., Asustek Computer Inc., AU Optronics, BE Semiconductor Industries NV, BYD Electronics, Cisco Systems Inc, Coherent Corp, Compal Electronics, Corning Inc, E Ink Holdings Inc., Eoptolink Technology Inc Ltd, Foxconn Technology, Giga-Byte Technology Co. Ltd., GoerTek Inc, Hon Hai Precision, Innolux, Lenovo, Lingyi Itech Guangdong Co, Motorola Solutions Inc, Nokia Oyj, Quanta Computer Inc., Xiaomi Corp, Yageo Corp., Zebra Technologies Corporation.

Within the last 12 months, Morgan Stanley has provided or is providing investment banking services to, or has an investment banking client relationship with, the following company: AAC Technologies Holdings, Accton Technology Corporation, Acer Inc., Advantech, AirTAC International, Aixtron SE, Arista Networks, Asia Vital Components Co. Ltd., Asustek Computer Inc., AU Optronics, Axon Enterprise Inc, BE Semiconductor Industries NV, Bizlink, Catcher Technology, Chenbro, Ciena Corporation, Cisco Systems Inc, Coherent Corp, Compal Electronics, Corning Inc,

Delta Electronics Inc., E Ink Holdings Inc., Ennostar Inc, Eoptolink Technology Inc Ltd, F5 Inc, FIT Hon Teng Ltd, Giga-Byte Technology Co. Ltd., Gold Circuit Electronics Ltd., Hon Hai Precision, Innolux, Keysight Technologies Inc, Lenovo, Lens Technology, Lingyi Itech Guangdong Co, Lite-On Technology, Lumentum Holdings Inc, Luxshare Precision Industry Co., Ltd., Motorola Solutions Inc, Nokia Oyj, Pegatron Corporation, Q Technology (Group) Company Ltd, Quanta Computer Inc., Sanan Optoelectronics, Shenzhen Transsion Holdings Co Ltd, Soitec SA, STMicroelectronics NV, Suzhou TFC Optical Communication Co Ltd., TCL Corp., Unimicron, Wistron Corporation, Wiwynn Corp, Xiaomi Corp, Yageo Corp., Yangtze Optical Fibre and Cable JSC Ltd, Zebra Technologies Corporation, Zhen Ding, Zhongji Innolight Co Ltd.

Within the last 12 months, Morgan Stanley has either provided or is providing non-investment banking, securities-related services to and/or in the past has entered into an agreement to provide services or has a client relationship with the following company: AAC Technologies Holdings, Accton Technology Corporation, Acer Inc., Aixtron SE, Asustek Computer Inc., AU Optronics, Axon Enterprise Inc, BE Semiconductor Industries NV, BYD Electronics, Cisco Systems Inc, Coherent Corp, Compal Electronics, Corning Inc, E Ink Holdings Inc., Eoptolink Technology Inc Ltd, Foxconn Technology, Giga-Byte Technology Co. Ltd., GoerTek Inc, Hon Hai Precision, Innolux, Lenovo, Lingyi Itech Guangdong Co, Motorola Solutions Inc, Nokia Oyj, Quanta Computer Inc., Xiaomi Corp, Yageo Corp., Zebra Technologies Corporation, Zhen Ding.

Morgan Stanley & Co. LLC makes a market in the securities of Ciena Corporation, F5 Inc, Keysight Technologies Inc.

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.

Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

## STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

## Global Stock Ratings Distribution

(as of April 30, 2026)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.

For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

| Stock Rating Category | Coverage Universe |            | Investment Banking Clients (IBC) |                |                      | Other Material Investment Services Clients (MISC) |                       |
|-----------------------|-------------------|------------|----------------------------------|----------------|----------------------|---------------------------------------------------|-----------------------|
|                       | Count             | % of Total | Count                            | % of Total IBC | % of Rating Category | Count                                             | % of Total Other MISC |
| Overweight/Buy        | 1546              | 42%        | 467                              | 51%            | 30%                  | 709                                               | 44%                   |
| Equal-weight/Hold     | 1568              | 43%        | 358                              | 39%            | 23%                  | 715                                               | 44%                   |
| Not-Rated/Hold        | 4                 | 0%         | 0                                | 0%             | 0%                   | 1                                                 | 0%                    |
| Underweight/Sell      | 555               | 15%        | 84                               | 9%             | 15%                  | 202                                               | 12%                   |
| Total                 | 3,673             |            | 909                              |                |                      | 1627                                              |                       |

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months. Due to rounding off of decimals, the percentages provided in the "% of total" column may not add up to exactly 100 percent.

## Analyst Stock Ratings

**Overweight (O or Over)** - The stock's total return is expected to exceed the total return of the relevant country MSCI Index or the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis over the next 12-18 months.

**Equal-weight (E or Equal)** - The stock's total return is expected to be in line with the total return of the relevant country MSCI Index or the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis over the next 12-18 months.

**Not-Rated (NR)** - Currently the analyst does not have adequate conviction about the stock's total return relative to the relevant country MSCI Index or the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

**Underweight (U or Under)** - The stock's total return is expected to be below the total return of the relevant country MSCI Index or the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

## Analyst Industry Views

**Attractive (A):** The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated

below.

In-Line (I): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be in line with the relevant broad market benchmark, as indicated below.  
 Cautious (C): The analyst views the performance of his or her industry coverage universe over the next 12-18 months with caution vs. the relevant broad market benchmark, as indicated below.  
 Benchmarks for each region are as follows: North America - S&P 500; Latin America - relevant MSCI country index or MSCI Latin America Index; Europe - MSCI Europe; Japan - TOPIX; Asia - relevant MSCI country index or MSCI sub-regional index or MSCI AC Asia Pacific ex Japan Index.

## Important Disclosures for Morgan Stanley Smith Barney LLC Customers

Important disclosures regarding any material conflict of interest that can reasonably be expected to have influenced Morgan Stanley Smith Barney LLC's choice of a third-party research provider or the subject company of a third-party research report, are available on the Morgan Stanley Wealth Management disclosure website at [www.morganstanley.com/online/researchdisclosures](http://www.morganstanley.com/online/researchdisclosures). For Morgan Stanley specific disclosures, you may refer to <https://www.morganstanley.com/eqr/disclosures/webapp/generalresearch>.

Each Morgan Stanley research report is reviewed and approved on behalf of Morgan Stanley Smith Barney LLC. This review and approval is conducted by the same person who reviews the research report on behalf of Morgan Stanley. This could create a conflict of interest.

## Other Important Disclosures

A member of Research who had or could have had access to the research prior to completion owns securities (or related derivatives) in the Cisco Systems Inc. This person is not a research analyst or a member of research analyst's household.

Morgan Stanley Research policy is to update research reports as and when the Research Analyst and Research Management deem appropriate, based on developments with the issuer, the sector, or the market that may have a material impact on the research views or opinions stated therein. In addition, certain Research publications are intended to be updated on a regular periodic basis (weekly/monthly/quarterly/annual) and will ordinarily be updated with that frequency, unless the Research Analyst and Research Management determine that a different publication schedule is appropriate based on current conditions.

Morgan Stanley is not acting as a municipal advisor and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act.

Morgan Stanley produces an equity research product called a "Tactical Idea." Views contained in a "Tactical Idea" on a particular stock may be contrary to the recommendations or views expressed in research on the same stock. This may be the result of differing time horizons, methodologies, market events, or other factors. For all research available on a particular stock, please contact your sales representative or go to Matrix at <http://www.morganstanley.com/matrix>.

Morgan Stanley Research is provided to our clients through our proprietary research portal on Matrix and also distributed electronically by Morgan Stanley to clients. Certain, but not all, Morgan Stanley Research products are also made available to clients through third-party vendors or redistributed to clients through alternate electronic means as a convenience. For access to all available Morgan Stanley Research, please contact your sales representative or go to Matrix at <http://www.morganstanley.com/matrix>.

Morgan Stanley Research does not provide individually tailored investment advice. Morgan Stanley Research has been prepared without regard to the circumstances and objectives of those who receive it. Morgan Stanley recommends that investors independently evaluate particular investments and strategies, and encourages investors to seek the advice of a financial adviser. The appropriateness of an investment or strategy will depend on an investor's circumstances and objectives. The securities, instruments, or strategies discussed in Morgan Stanley Research may not be suitable for all investors, and certain investors may not be eligible to purchase or participate in some or all of them. Morgan Stanley Research is not an offer to buy or sell or the solicitation of an offer to buy or sell any security/instrument or to participate in any particular trading strategy. The value of and income from your investments may vary because of changes in interest rates, foreign exchange rates, default rates, prepayment rates, securities/instruments prices, market indexes, operational or financial conditions of companies or other factors. There may be time limitations on the exercise of options or other rights in securities/instruments transactions. Past performance is not necessarily a guide to future performance. Estimates of future performance are based on assumptions that may not be realized. If provided, and unless otherwise stated, the closing price on the cover page is that of the primary exchange for the subject company's securities/instruments.

The fixed income research analysts, strategists or economists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality, accuracy and value of research, firm profitability or revenues (which include fixed income trading and capital markets profitability or revenues), client feedback and competitive factors. Fixed Income Research analysts', strategists' or economists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

The "Important Regulatory Disclosures on Subject Companies" section in Morgan Stanley Research lists all companies mentioned where Morgan Stanley owns 1% or more of a class of common equity securities of the companies. For all other companies mentioned in Morgan Stanley Research, Morgan Stanley may have an investment of less than 1% in securities/instruments or derivatives of securities/instruments of companies and may trade them in ways different from those discussed in Morgan Stanley Research. Employees of Morgan Stanley not involved in the preparation of Morgan Stanley Research may have investments in securities/instruments or derivatives of securities/instruments of companies mentioned and may trade them in ways different from those discussed in Morgan Stanley Research. Derivatives may be issued by Morgan Stanley or associated persons.

With the exception of information regarding Morgan Stanley, Morgan Stanley Research is based on public information. Morgan Stanley makes every effort to use reliable, comprehensive information, but we make no representation that it is accurate or complete. We have no obligation to tell you when opinions or information in Morgan Stanley Research change apart from when we intend to discontinue equity research coverage of a subject company. Facts and views presented in Morgan Stanley Research have not been reviewed by, and may not reflect information known to, professionals in other Morgan Stanley business areas, including investment banking personnel.

Morgan Stanley Research personnel may participate in company events such as site visits and are generally prohibited from accepting payment by the company of associated expenses unless pre-approved by authorized members of Research management.

Morgan Stanley may make investment decisions that are inconsistent with the recommendations or views in this report.

To our readers based in Taiwan or trading in Taiwan securities/instruments: Information on securities/instruments that trade in Taiwan is distributed by Morgan Stanley Taiwan Limited ("MSTL"). Such information is for your reference only. The reader should independently evaluate the investment risks and is solely responsible for their investment decisions. Morgan Stanley Research may not be distributed to the public media or quoted or used by the public media without the express written consent of Morgan Stanley. Any non-customer reader within the scope of Article 7-1 of the Taiwan Stock Exchange Recommendation Regulations accessing and/or receiving Morgan Stanley Research is not permitted to provide Morgan Stanley Research to any third party (including but not limited to related parties, affiliated companies and any other third parties) or engage in any activities regarding Morgan Stanley Research which may create or give the appearance of creating a conflict of interest. Information on securities/instruments that do not trade in Taiwan is for informational purposes only and is not to be construed as a recommendation or a solicitation to trade in such securities/instruments. MSTL may not execute transactions for clients in these securities/instruments.

Certain information in Morgan Stanley Research was sourced by employees of the Shanghai Representative Office of Morgan Stanley Asia Limited for the use of Morgan Stanley Asia Limited. Morgan Stanley is not incorporated under PRC law and the research in relation to this report is conducted outside the PRC. Morgan Stanley Research does not constitute an offer to sell or the solicitation of an offer to buy any securities in the PRC. PRC investors shall have the relevant qualifications to invest in such securities and shall be responsible for obtaining all relevant approvals, licenses, verifications and/or registrations from the relevant governmental authorities themselves. Neither this report nor any part of it is intended as, or shall constitute, provision of any consultancy or advisory service of securities investment as defined under PRC law.
